Task List (0–100) for HelpHub App **3**
0️⃣ Project Setup & Environment 3
1️⃣ User Authentication & Profiles 4
2️⃣ Service Categories & Listing 5
3️⃣ Job Posting & Requests (User) 5
4️⃣ Job Matching & Provider Alerts 6
5️⃣ Bidding & Pricing 6
6️⃣ Job Status & Tracking 7
7️⃣ Payments 7
8️⃣ Ratings & Reviews 8
9️⃣ Provider Onboarding & Verification 8
Module: User Authentication & Profiles **9**
1️⃣ User Registration via Email/Mobile 9
2️⃣ User Login via Email/Mobile 10
3️⃣ Social Login (Google, Facebook, Apple) 10
4️⃣ Password Reset / Recovery 11
5️⃣ OTP Verification Integration 11
6️⃣ Profile Editing (Name, Picture, Phone, Email) 12
7️⃣ Add & Manage Saved Addresses 12
8️⃣ Add Payment Methods (Cards / Wallets / Bank) 13
9️⃣ Language Preference Selection (Sinhala / Tamil / English) 14
🔟 User Profile Picture Upload 14
Module: Service Categories & Listing **15**
1️⃣ Create Main Categories (Transport, Home, Garden…) 15
2️⃣ Create Subcategories for Transport & Travel 16
3️⃣ Create Subcategories for Home Services 16
4️⃣ Create Subcategories for Outdoor & Garden 17
5️⃣ Create Subcategories for Household Help 17
6️⃣ Create Subcategories for Delivery & Errands 17
7️⃣ Create Subcategories for Handyman & Labor 18
8️⃣ Create Subcategories for Skilled Freelancers 18
9️⃣ Create Subcategories for Personal Care 18
🔟 Assign Icons / Images for Each Category 18
Module: Job Posting & Requests (User) **19**
1️⃣ UI for Job Posting 19
2️⃣ Add Job Title & Description Field 20
3️⃣ Add Location Selection (Map Pin / GPS) 20
4️⃣ Add Image Upload Option 21
5️⃣ Add Optional Preferred Price Field 21
6️⃣ Add Job Urgency / Time Scheduling 22

7️⃣ Add Recurring Job Option....22
8️⃣ Validate Required Fields Before Posting....23
9️⃣ Push Notification Triggers for Posted Jobs....23
🔟 Save Job Templates for Future Use....24
Module: Job Matching & Provider Alerts....24
1️⃣ Real-Time Notification System for Providers....25
2️⃣ Match Providers Based on Location & Skill....25
3️⃣ Push Notification for New Job....26
4️⃣ In-App Notification for New Job....26
5️⃣ Job Expiration Timer if Not Accepted....27
6️⃣ Provider Filtering by Rating....27
7️⃣ Provider Filtering by Distance....28
8️⃣ AI-Based Provider Suggestions....28
9️⃣ Push Notification for Job Updates....29
🔟 Job Acceptance/Rejection Logging....29
Module: Bidding & Pricing....30
1️⃣ Allow Provider to Submit Bid....30
2️⃣ Allow Provider to Adjust Quote After Viewing Job....31
3️⃣ User Sees List of Bids....31
4️⃣ User Selects Bid....32
5️⃣ Notify Provider of Acceptance / Rejection....32

3️⃣ 1–5 Star Rating System....49
4️⃣ Text Review Submission....50
5️⃣ Optional Image/Video Feedback....50
6️⃣ View Ratings Before Hiring Provider....51
7️⃣ Provider Response to Reviews....51
8️⃣ Top-Rated Provider Badges....52
9️⃣ Gamified Reward for Frequent Reviewers....52
🔟 Flag Inappropriate Reviews....53
Module: Provider Onboarding & Verification....54
1️⃣ Upload National ID....54
2️⃣ Upload Selfie Photo....54
3️⃣ Upload Optional Certificates....55
4️⃣ Select Service Categories....55
5️⃣ Admin Verification Workflow....56
6️⃣ AI-Based Face Match for ID Verification....56
7️⃣ Assign “Verified” Badge....57
8️⃣ Display Provider Profile & Portfolio....58
9️⃣ Set Provider Availability Schedule....58
🔟 Provider Dashboard for Earnings & Jobs....59

Task List (0–100) for HelpHub App

0️⃣ Project Setup & Environment

1. Initialize Git repository for project
2. Set up Android project (Kotlin/Java)
3. Set up iOS project (Swift)
4. Create web portal repository (React/Vue)
5. Set up backend repository (Node.js / Laravel / Django)
6. Configure database (PostgreSQL/MySQL/MongoDB)
7. Set up cloud hosting environment (AWS/GCP/Azure)
8. Set up dev, staging, production environments
9. Configure CI/CD pipeline
10. Integrate logging & monitoring tools

1️⃣ User Authentication & Profiles

11. User registration via email/mobile
12. User login via email/mobile
13. Social login (Google, Facebook, Apple)
14. Password reset / recovery
15. OTP verification integration
16. Profile editing (name, picture, phone, email)
17. Add & manage saved addresses
18. Add payment methods (cards/wallets/bank)

19. Language preference selection (Sinhala/Tamil/English)

20. User profile picture upload

2️⃣ Service Categories & Listing

21. Create main categories (Transport, Home, Garden…)

22. Create subcategories for Transport & Travel

23. Create subcategories for Home Services

24. Create subcategories for Outdoor & Garden

25. Create subcategories for Household Help

26. Create subcategories for Delivery & Errands

27. Create subcategories for Handyman & Labor

28. Create subcategories for Skilled Freelancers

29. Create subcategories for Personal Care

30. Assign icons/images for each category

3️⃣ Job Posting & Requests (User)

31. UI for job posting

32. Add job title & description field

33. Add location selection (map pin/GPS)

34. Add image upload option

35. Add optional preferred price field

36. Add job urgency/time scheduling

37. Add recurring job option

38. Validate required fields before posting

39. Push notification triggers for posted jobs

40. Save job templates for future use

4️⃣ Job Matching & Provider Alerts

41. Real-time notification system for providers

42. Match providers based on location & skill

43. Push notification for new job

44. In-app notification for new job

45. Job expiration timer if not accepted

46. Provider filtering by rating

47. Provider filtering by distance

48. AI-based provider suggestions

49. Push notification for job updates

50. Job acceptance/rejection logging

5️⃣ Bidding & Pricing

51. Allow provider to submit bid

52. Allow provider to adjust quote after viewing job

53. User sees list of bids

54. User selects bid

55. Notify provider of acceptance/rejection

56. Show estimated price to user before job acceptance

57. Display commission deducted

58. Fixed-price job option for user

59. Negotiation chat option

60. AI-suggested pricing based on category/location

---

6 Job Status & Tracking

61. Job status: Pending / Accepted / In-progress / Completed / Cancelled

62. Provider marks job as started

63. Provider marks job as completed

64. User marks job as completed

65. Real-time job progress updates

66. Map tracking for transport jobs

67. Job history view for users

68. Job history view for providers

69. Notification for job completion

70. Job dispute initiation

---

7 Payments

71. Integrate payment gateway (Stripe/PayHere/PayPal)

72. Support multiple payment methods (cards/wallets/bank)

73. Escrow payment system

74. Payment confirmation notification

75. Display invoice / receipt

76. Split payments support (for group jobs)

77. Refund handling workflow

78. Transaction history view

79. Provider payout request feature

80. Automated commission deduction

---

8 Ratings & Reviews

81. User rating provider after job

82. Provider rating user after job

83. 1–5 star rating system

84. Text review submission

85. Optional image/video feedback

86. View ratings before hiring provider

87. Provider response to reviews

88. Top-rated provider badges

89. Gamified reward for frequent reviewers

90. Flag inappropriate reviews

---

9 Provider Onboarding & Verification

91. Upload National ID

92. Upload selfie photo

93. Upload optional certificates

94. Select service categories

95. Admin verification workflow

96. AI-based face match for ID verification

97. Assign “Verified” badge

98. Display provider profile & portfolio

99. Set provider availability schedule

100. Provider dashboard for earnings & jobs

Module: User Authentication & Profiles

This module handles all **user account-related functionalities**, ensuring secure access, personalization, and a seamless user experience.

1️⃣ User Registration via Email/Mobile

Task: Allow new users to create an account.
Fields:

- Full Name (Text)
- Email (Text, unique)
- Mobile Number (Text, unique)
- Password (Encrypted)
- Optional: Profile Picture

Functions:

- Validate email & mobile format
- Check for duplicate accounts

- Encrypt password before storing
- Send confirmation email or SMS with OTP
- Create user record in database

Purpose: Securely onboard new users while capturing essential contact details.

2️⃣ User Login via Email/Mobile

Task: Authenticate existing users.
Fields:

- Email or Mobile (Text)
- Password (Encrypted)

Functions:

- Validate credentials
- Generate secure session token (JWT / OAuth token)
- Support “Remember Me” option
- Track login history (optional)

Purpose: Grant secure access to registered users.

3️⃣ Social Login (Google, Facebook, Apple)

Task: Allow login via third-party accounts for convenience.
Fields:

- OAuth token / Social provider ID
- Name & Email (from provider)
- Profile Picture (optional)

Functions:

- Integrate OAuth2 login flows
- Fetch user profile from provider
- Create account if first-time login
- Link social account to existing user account (optional)

Purpose: Reduce friction during signup/login and improve retention.

4️⃣ Password Reset / Recovery

Task: Allow users to recover forgotten passwords.
Fields:

- Email / Mobile (Text)
- OTP / Reset token
- New Password

Functions:

- Send OTP or reset link via email/SMS
- Validate OTP / reset token
- Update password in database (encrypted)
- Notify user of successful reset

Purpose: Ensure account security while providing a recovery path.

5️⃣ OTP Verification Integration

Task: Provide extra security during registration, login, or sensitive actions.
Fields:

- Mobile Number / Email (Text)
- OTP (Numeric, typically 4–6 digits)

Functions:

- Generate OTP
- Send OTP via SMS/email
- Validate OTP before proceeding
- Expire OTP after a short time

Purpose: Verify user identity and reduce fraudulent access.

6️⃣ Profile Editing (Name, Picture, Phone, Email)

Task: Enable users to update their personal information.
Fields:

- Name (Text)
- Phone (Text)
- Email (Text, unique)
- Profile Picture (Image)

Functions:

- Form validation for each field
- Check for uniqueness of email/phone
- Compress and store profile image
- Update database record
- Notify user of successful update

Purpose: Allow users to maintain accurate contact info and profile personalization.

7️⃣ Add & Manage Saved Addresses

Task: Enable users to save, edit, and delete multiple addresses.
Fields:

- Address Label (Home, Work, Other)
- Address Line 1 / 2
- City / Postal Code
- GPS Coordinates (Latitude, Longitude)

Functions:

- Add new address
- Edit existing address
- Delete address
- Set default address for job requests

Purpose: Speed up job creation by reusing saved addresses and ensuring accurate location data.

8️⃣ Add Payment Methods (Cards / Wallets / Bank)

Task: Allow users to add and manage multiple payment methods.
Fields:

- Card Number / Wallet ID / Bank Account
- Expiry Date
- CVV / Security Code
- Name on Card
- Billing Address

Functions:

- Securely store payment info (PCI-DSS compliant)
- Allow addition, editing, and deletion
- Set default payment method
- Integrate with payment gateway APIs

Purpose: Enable seamless and secure payments within the app.

9️⃣ Language Preference Selection (Sinhala / Tamil / English)

Task: Allow users to select their preferred app language.
Fields:

- Language option (Enum: Sinhala, Tamil, English)

Functions:

- Store language preference in user profile
- Apply localization across app UI
- Load content in selected language for all screens

Purpose: Enhance user experience by supporting multi-language accessibility.

🔟 User Profile Picture Upload

Task: Allow users to upload or change profile images.
Fields:

- Image file (jpg, png)
- Optional: Image cropping / resizing

Functions:

- Select image from device gallery or camera
- Compress and resize image for storage
- Upload to server and link to user profile
- Display image in app and on job postings

Purpose: Personalize user identity and enhance trust between users and providers.

Module: Service Categories & Listing

This module manages the **categorization of all services** in the app, ensuring users can easily find services and providers can be properly classified.

1️⃣ Create Main Categories (Transport, Home, Garden…)

Task: Define and store main service categories.
Fields:

- Category Name (Text)
- Description (Text)
- Icon/Image (Image URL or Asset)
- Status (Active/Inactive)
- Display Order (Integer)

Functions:

- Add new main category
- Edit category details
- Deactivate or delete categories (soft delete recommended)
- Display categories in the app home screen

Purpose: Provide a clear structure for the app and allow users to navigate services easily.

2️⃣ Create Subcategories for Transport & Travel

Task: Define subcategories under Transport & Travel.
Subcategories Examples: 3-wheel / Car / Van hire, 7-seater vehicles, Drivers for hire, Airport transfers

Fields:

- Subcategory Name (Text)
- Parent Category (Transport & Travel)
- Description (Text)
- Icon/Image (Optional)
- Status (Active/Inactive)

Functions:

- Add new subcategories under the parent category
- Edit or deactivate subcategories
- Link subcategories to providers and jobs

Purpose: Allow detailed classification of transport services for easier search and provider matching.

3️⃣ Create Subcategories for Home Services

Task: Define subcategories under Home Services.
Subcategories Examples: Plumbing, Electrical Repairs, Carpentry, Painting, AC repair

Fields:

- Subcategory Name (Text)
- Parent Category (Home Services)

- Description (Text)
- Icon/Image (Optional)
- Status (Active/Inactive)

Functions:

- CRUD operations for subcategories
- Assign subcategories to verified providers
- Display subcategories when users search for home services

Purpose: Make the app more organized and allow users to filter services by type.

---

4 Create Subcategories for Outdoor & Garden

Task: Define subcategories under Outdoor & Garden.
Subcategories Examples: Grass Cutting, Tree Trimming, Landscaping, Gardening

Fields & Functions: Same structure as Home Services subcategories.

Purpose: Enable users to find garden/outdoor service providers easily.

---

5 Create Subcategories for Household Help

Task: Define subcategories under Household Help.
Subcategories Examples: Home Cleaning, Deep Cleaning, Laundry Pickup, Ironing

Fields & Functions: Same structure as above.

Purpose: Allow users to locate domestic help services efficiently.

---

6 Create Subcategories for Delivery & Errands

Task: Define subcategories under Delivery & Errands.
Subcategories Examples: Parcel Delivery, Document Pickup, Grocery Pickup

Fields & Functions: Same structure as above.

Purpose: Organize delivery and errands services for fast access.

7️⃣ Create Subcategories for Handyman & Labor

Task: Define subcategories under Handyman & Labor.
Subcategories Examples: Furniture Assembly, Mounting Shelves/TV, Small Construction Help

Fields & Functions: Same structure as above.

Purpose: Allow proper classification of manual labor and repair services.

8️⃣ Create Subcategories for Skilled Freelancers

Task: Define subcategories under Skilled Freelancers.
Subcategories Examples: Graphic Design, Photography, Videography, IT Support, Tutors

Fields & Functions: Same structure as above.

Purpose: Organize digital and professional freelance services for easy selection.

9️⃣ Create Subcategories for Personal Care

Task: Define subcategories under Personal Care.
Subcategories Examples: Elderly Assistance, Babysitting, Personal Trainers, Beauty & Grooming

Fields & Functions: Same structure as above.

Purpose: Allow users to find care services efficiently, supporting urgent or scheduled needs.

🔟 Assign Icons / Images for Each Category

Task: Visually represent each category for better UX.
Fields:

- Category ID / Subcategory ID

- Icon / Image file (PNG, SVG)
- Optional: Color code for category

Functions:

- Upload and store icon/images
- Assign to main category or subcategory
- Display on app home screen, search, and category listings

Purpose: Improve navigation, recognition, and app aesthetics; visually guide users to services.

Module: Job Posting & Requests (User)

This module allows **users to post service requests/jobs** and ensures the system captures all necessary details to match the right providers efficiently.

1️⃣ UI for Job Posting

Task: Design and implement the user interface for posting jobs.
Fields:

- Job Title (Text)
- Job Description (Text)
- Location (Map / Address)
- Images (Optional)
- Preferred Price (Optional)
- Date & Time (Job Schedule)
- Recurring Job Option (Checkbox / Schedule)

Functions:

- Display clean, intuitive form
- Provide category/subcategory dropdown for selecting service type
- Show real-time validation errors
- Responsive design for mobile and tablet

Purpose: Make job posting **simple, fast, and intuitive** for users.

2️⃣ Add Job Title & Description Field

Task: Capture the **name and details of the service request**.
Fields:

- Job Title (Text, 5–100 characters)
- Job Description (Text, 20–500 characters)

Functions:

- Validate length and required fields
- Support rich text or line breaks for clarity
- Optionally, allow formatting (bold, bullet points)

Purpose: Clearly describe the job so providers understand requirements.

3️⃣ Add Location Selection (Map Pin / GPS)

Task: Allow users to **select job location**.
Fields:

- Address (Text)
- GPS Coordinates (Latitude, Longitude)

Functions:

- Integrate Google Maps / Mapbox / OpenStreetMap
- Allow pin drop or auto-detect current location
- Validate location is within serviceable area

Purpose: Ensure providers can locate the job accurately for real-time matching.

4️⃣ Add Image Upload Option

Task: Let users upload images to clarify the job.
Fields:

- Image file (jpg, png, max size 5MB)
- Optional caption

Functions:

- Allow multiple image uploads
- Compress/resize images before upload
- Display thumbnails in the job post

Purpose: Help providers understand the task better, improving accuracy of bids.

5️⃣ Add Optional Preferred Price Field

Task: Allow users to suggest a price for the job.
Fields:

- Preferred Price (Numeric, currency)

Functions:

- Validate numeric input
- Optional field, can leave blank

- Display preferred price to providers in job details

Purpose: Gives users control over pricing while allowing provider negotiation.

---

6 Add Job Urgency / Time Scheduling

Task: Enable users to schedule jobs for a specific time or date.
Fields:

- Date Picker (Job Date)
- Time Picker (Job Time)
- Urgency Flag (Normal / Urgent)

Functions:

- Validate future date/time
- Highlight urgent jobs in provider notifications
- Store schedule in database for reminders and matching

Purpose: Supports real-time scheduling and prioritization for both users and providers.

---

7 Add Recurring Job Option

Task: Allow recurring or repeated jobs.
Fields:

- Recurring Type (Daily, Weekly, Monthly)
- End Date (Optional)
- Time of Day

Functions:

- Schedule automatic job creation at defined intervals

- Notify providers of recurring jobs
- Allow users to pause/cancel recurring jobs

Purpose: Useful for services like cleaning, gardening, or regular maintenance.

---

8 Validate Required Fields Before Posting

Task: Ensure all mandatory information is captured.
Fields to validate:

- Job Title (required)
- Job Description (required)
- Location (required)
- Service Category (required)

Functions:

- Frontend validation before submission
- Backend validation for security
- Show error messages for missing fields

Purpose: Prevent incomplete job requests and reduce provider confusion.

---

9 Push Notification Triggers for Posted Jobs

Task: Notify providers when a new job is posted.
Fields / Data:

- Job ID
- Location
- Category & Subcategory

- Preferred Price (if any)

Functions:

- Trigger push notifications to nearby verified providers
- Allow filters (distance, category)
- Store notification history

Purpose: Ensure **real-time matching** between users and providers.

🔟 Save Job Templates for Future Use

Task: Let users save frequent job types as templates.
Fields:

- Template Name (Text)
- Job Title & Description
- Location
- Preferred Price
- Category & Subcategory

Functions:

- Save template in user profile
- Allow editing or deleting templates
- Quick-load template when posting a new job

Purpose: Reduce time and friction for recurring or common jobs.

Module: Job Matching & Provider Alerts

This module handles **matching users' job requests to nearby verified providers** and notifying them in real-time, ensuring jobs are accepted promptly and efficiently.

1️⃣ Real-Time Notification System for Providers

Task: Notify providers instantly when a job is posted.
Fields / Data:

- Job ID
- Job Title & Description
- Job Location (lat/lng)
- Category / Subcategory
- Preferred Price (if any)

Functions:

- Integrate push notifications (Firebase / OneSignal / APNs)
- Deliver notifications in real-time
- Track read/unread status for providers

Purpose: Ensure providers are aware of new jobs immediately, enabling quick responses.

2️⃣ Match Providers Based on Location & Skill

Task: Find suitable providers for each job.
Fields / Data:

- Provider Location (lat/lng)
- Provider Skill Categories
- Provider Availability

Functions:

- Filter providers within a specified radius

- Filter by relevant skill set / category
- Exclude unavailable providers

Purpose: Ensure the **most relevant providers** see jobs, improving acceptance rate and efficiency.

3️⃣ Push Notification for New Job

Task: Send alerts to providers' devices for newly posted jobs.
Fields / Data:

- Job ID
- Provider Device Token
- Job Category / Subcategory
- Distance from provider

Functions:

- Send push notifications instantly
- Include job summary (title, location, price)
- Open job details screen when tapped

Purpose: Prompt providers to take immediate action on new jobs.

4️⃣ In-App Notification for New Job

Task: Show notification inside the app.
Fields / Data:

- Job ID
- Job Title
- Posted Time

Functions:

- Store notifications in provider's notification feed
- Mark notifications as read/unread
- Allow click-through to job details

Purpose: Keep providers informed if they missed push notifications.

5️⃣ Job Expiration Timer if Not Accepted

Task: Automatically expire jobs not accepted within a set time.
Fields / Data:

- Job ID
- Posted Timestamp
- Expiration Time (configurable)

Functions:

- Start countdown upon job posting
- Notify user if no provider accepts
- Remove expired jobs from provider feed

Purpose: Prevent stale job requests from cluttering provider feeds and improve response efficiency.

6️⃣ Provider Filtering by Rating

Task: Prioritize higher-rated providers for job suggestions.
Fields / Data:

- Provider Rating (1–5 stars)
- Minimum rating filter (configurable)

Functions:

- Sort providers by rating when matching jobs
- Exclude providers below threshold
- Display rating in notifications

Purpose: Ensure quality service by highlighting **trusted and highly-rated providers**.

7️⃣ Provider Filtering by Distance

Task: Show jobs only to nearby providers.
Fields / Data:

- Job Location (lat/lng)
- Provider Location (lat/lng)
- Maximum distance (km/miles)

Functions:

- Calculate distance using Haversine formula / Geo API
- Filter providers outside allowed radius
- Prioritize closest providers in notifications

Purpose: Reduce travel time and ensure faster job fulfillment.

8️⃣ AI-Based Provider Suggestions

Task: Suggest providers based on **historical performance, availability, and skills**.
Fields / Data:

- Provider past jobs & ratings
- Provider acceptance rate

- Job category/subcategory

Functions:

- Machine learning model to rank providers
- Suggest top 3–5 providers for each job
- Continuously update suggestions based on data

Purpose: Increase job acceptance rate and improve user satisfaction.

9️⃣ Push Notification for Job Updates

Task: Notify providers of updates on accepted jobs.
Fields / Data:

- Job ID
- Updated Status (e.g., changed time, canceled)

Functions:

- Send real-time push notification
- Include relevant info (time change, address update)
- Update in-app notification feed

Purpose: Keep providers aware of any **changes to jobs they've accepted**.

🔟 Job Acceptance/Rejection Logging

Task: Track provider decisions for reporting and analytics.
Fields / Data:

- Job ID
- Provider ID

- Action (Accepted / Rejected)
- Timestamp

Functions:

- Log actions in database
- Generate metrics (acceptance rate per provider, average response time)
- Use data for AI-based suggestions and performance reviews

Purpose: Maintain accountability and improve **matching efficiency**.

Module: Bidding & Pricing

This module handles **how service providers submit quotes** for jobs, how users select them, and how pricing transparency and commissions are managed.

1️⃣ Allow Provider to Submit Bid

Task: Enable providers to propose a price for a posted job.
Fields:

- Job ID
- Provider ID
- Bid Amount (Numeric, currency)
- Optional message / note
- Timestamp

Functions:

- Submit bid via app
- Validate bid against minimum/maximum limits (optional)
- Store bid in database for user review

- Trigger notification to user of new bid

Purpose: Allow providers to compete fairly and give users price options.

2️⃣ Allow Provider to Adjust Quote After Viewing Job

Task: Let providers modify their bid after seeing detailed job info.
Fields:

- Original Bid ID
- Updated Bid Amount
- Optional message explaining change
- Timestamp

Functions:

- Validate updated amount
- Notify user of updated bid
- Keep a history of bid changes

Purpose: Supports **flexible negotiation** and ensures providers can adjust for job complexity.

3️⃣ User Sees List of Bids

Task: Display all received bids for a job.
Fields:

- Provider Name & Rating
- Bid Amount
- Optional notes from provider
- Bid timestamp

Functions:

- Sort bids by amount, provider rating, or distance
- Highlight best match or AI-recommended bid
- Allow user to click for provider details

Purpose: Enable informed **decision-making** for users based on price, rating, and provider profile.

---

4 User Selects Bid

Task: Let the user approve a bid to assign the job.
Fields:

- Job ID
- Selected Provider ID
- Selected Bid Amount

Functions:

- Update job status to “Accepted”
- Lock bid to prevent further changes
- Trigger notifications to provider (acceptance) and other providers (rejection)

Purpose: Assigns job officially and triggers provider workflow.

---

5 Notify Provider of Acceptance / Rejection

Task: Keep providers informed about their bid status.
Fields:

- Provider ID
- Job ID

- Status (Accepted / Rejected)
- Timestamp

Functions:

- Push notification for accepted/rejected bids
- Update in-app notifications
- Email notification (optional)

Purpose: Maintain transparency and ensure providers are aware of their bid outcome.

---

6 Show Estimated Price to User Before Job Acceptance

Task: Give user an **expected cost range** before confirming.
Fields:

- Job ID
- Estimated Price (Based on bids or AI suggestion)
- Commission info

Functions:

- Display price summary before acceptance
- Show high/low range if multiple bids exist
- Update dynamically if bids change

Purpose: Provide **price transparency** to avoid disputes.

---

7 Display Commission Deducted

Task: Show platform's commission for each job.
Fields:

- Job ID
- Bid Amount
- Commission % / Amount

Functions:

- Calculate commission automatically (10–20%)
- Display deduction to user and provider
- Include in final invoice or payment summary

Purpose: Maintain **financial transparency** and build trust.

---

8 Fixed-Price Job Option for User

Task: Allow users to post jobs with a set price.
Fields:

- Job ID
- Fixed Price Amount

Functions:

- Skip bidding process
- Notify relevant providers of job
- Providers can accept/reject at fixed price

Purpose: Simplify booking for users who want **instant, fixed-price jobs**.

---

9 Negotiation Chat Option

Task: Allow real-time discussion between user and provider for price or scope.
Fields:

- Job ID
- User ID / Provider ID
- Message Text
- Timestamp
- Optional attachments (images / files)

Functions:

- Real-time chat integration
- Store conversation history linked to job
- Notify both parties for new messages

Purpose: Facilitate **price negotiation and clarification**, reducing misunderstandings.

🔟 AI-Suggested Pricing Based on Category / Location (optional)

Task: Suggest competitive pricing for jobs.
Fields / Data:

- Job Category / Subcategory
- Job Location
- Provider rating / experience
- Historical bid data

Functions:

- Calculate recommended bid range using AI/ML model
- Display suggestion to providers while bidding
- Optionally, suggest fair price to users for fixed-price jobs

Purpose: Improve **fair pricing**, reduce disputes, and accelerate decision-making.

Module: Job Status & Tracking

This module manages **all stages of a job**, tracks progress in real-time, and ensures transparency for both users and providers.

1️⃣ Job Status: Pending / Accepted / In-progress / Completed / Cancelled

Task: Track the **current state of every job**.
Fields:

- Job ID
- Status (Pending, Accepted, In-progress, Completed, Cancelled)
- Timestamp for each status change
- Assigned Provider ID

Functions:

- Update job status automatically or manually
- Trigger notifications on status change
- Store historical status for reporting

Purpose: Keep both users and providers **informed of job progress**.

2️⃣ Provider Marks Job as Started

Task: Let providers indicate they have begun the job.
Fields:

- Job ID

- Provider ID
- Start Timestamp

Functions:

- Update job status to “In-progress”
- Notify user that provider has started
- Trigger map tracking if applicable

Purpose: Provides **real-time visibility** of job commencement.

3️⃣ Provider Marks Job as Completed

Task: Allow providers to mark the job as finished.
Fields:

- Job ID
- Provider ID
- Completion Timestamp
- Optional remarks / images as proof

Functions:

- Update job status to “Completed”
- Notify user that the job is finished
- Enable user to confirm completion

Purpose: Ensures jobs are **tracked until actual delivery**.

4️⃣ User Marks Job as Completed

Task: Let users confirm job completion.
Fields:

- Job ID
- User ID
- Confirmation Timestamp
- Optional rating/feedback

Functions:

- Update job status in system
- Trigger payment processing if post-payment model
- Allow review and rating submission

Purpose: Confirms **service delivery and satisfaction** before payment release.

5️⃣ Real-Time Job Progress Updates

Task: Provide live updates on job stages.
Fields / Data:

- Job ID
- Status (Pending → Accepted → In-progress → Completed)
- Timestamps for each change

Functions:

- Update job tracking feed in app
- Push notifications for key milestones
- Optional live chat integration

Purpose: Keeps users informed and reduces uncertainty about job progress.

6️⃣ Map Tracking for Transport Jobs

Task: Track provider location for transport or delivery jobs.
Fields:

- Provider GPS Coordinates (lat/lng)
- Job ID
- Estimated arrival time

Functions:

- Display provider location on user map
- Update location in real-time
- Show ETA for transport or delivery

Purpose: Improves transparency, reliability, and user trust for transport jobs.

7️⃣ Job History View for Users

Task: Allow users to see all past jobs.
Fields:

- Job ID
- Provider Name
- Service Category / Subcategory
- Status (Completed / Cancelled)
- Job Date & Time
- Price Paid

Functions:

- Sort / filter by date, category, status

- Access invoices, ratings, and receipts
- Repost recurring jobs using job templates

Purpose: Provides a **comprehensive record** of user activity and simplifies rebooking.

---

8 Job History View for Providers

Task: Allow providers to see all completed and pending jobs.
Fields:

- Job ID
- User Name
- Service Category / Subcategory
- Status
- Job Date & Time
- Earnings

Functions:

- Filter by date, status, category
- Access payment details
- Review customer feedback

Purpose: Enables providers to **track performance, earnings, and history**.

---

9 Notification for Job Completion

Task: Inform both parties when a job is marked as completed.
Fields / Data:

- Job ID

- Provider ID / User ID
- Completion Timestamp

Functions:

- Push notifications for both user and provider
- Update in-app notification feed
- Trigger post-job processes (payments, ratings)

Purpose: Ensures **timely awareness and closure** for completed jobs.

🔟 Job Dispute Initiation

Task: Allow users or providers to raise disputes for incomplete, unsatisfactory, or cancelled jobs.

Fields:

- Job ID
- Raised By (User / Provider)
- Dispute Reason (Dropdown / Text)
- Supporting Evidence (Images / Documents)
- Timestamp

Functions:

- Notify admin/support team
- Lock job payment until resolution
- Track dispute status and resolution history

Purpose: Provides a **formal channel for conflict resolution**, protecting both users and providers.

Module: Payments & Wallet Management

This module manages **all financial transactions** in the app, ensuring secure payments, escrow handling, commissions, and provider payouts.

1️⃣ Integrate Payment Gateway (Stripe / PayHere / PayPal)

Task: Enable secure payment processing through third-party gateways.
Fields / Data:

- User payment details (card, wallet, bank)
- Job ID
- Amount
- Currency

Functions:

- Connect app to chosen payment gateway API
- Tokenize and securely store payment methods
- Handle success/failure callbacks
- Encrypt sensitive data for security

Purpose: Facilitate **safe and reliable payments** for all jobs.

2️⃣ Support Multiple Payment Methods (Cards / Wallets / Bank)

Task: Allow users to pay via different methods.
Fields:

- Card (Visa, Mastercard, AMEX)

- Bank Transfer / Internet Banking
- App Wallet / Stored Balance
- Mobile Payment (e.g., Apple Pay / Google Pay)

Functions:

- Enable selection of preferred payment method
- Validate card/bank/wallet credentials
- Fallback to alternative method if transaction fails

Purpose: Increase **flexibility and convenience** for users.

3️⃣ Escrow Payment System

Task: Hold user payment until job completion.
Fields:

- Job ID
- Escrow Amount
- Release Conditions (job marked completed)

Functions:

- Lock funds after user payment
- Automatically release payment to provider upon job completion confirmation
- Notify both parties when funds are released

Purpose: Ensure **trust** between users and providers and reduce payment disputes.

4️⃣ Payment Confirmation Notification

Task: Inform both users and providers when payment is successful.
Fields / Data:

- Job ID
- Amount Paid
- Payment Method
- Timestamp

Functions:

- Push notification to user and provider
- Email notification with payment details
- Update in-app transaction history

Purpose: Maintain **transparency and reassurance** regarding payments.

5️⃣ Display Invoice / Receipt

Task: Generate invoices for each completed job.
Fields:

- Job ID
- User Name
- Provider Name
- Job Details
- Price, Commission, Taxes
- Total Amount Paid
- Date & Time

Functions:

- Generate PDF / downloadable invoice
- Store in user/provider profile for records
- Send invoice via email/app notification

Purpose: Provide **documentation and accountability** for every transaction.

6️⃣ Split Payments Support (for Group Jobs)

Task: Allow multiple users to share the cost of a single job.
Fields:

- Job ID
- User IDs (Participants)
- Individual Amounts
- Total Amount

Functions:

- Allow users to pay their portion individually
- Track contribution status
- Release payment to provider when full amount received

Purpose: Support **shared or collaborative services** efficiently.

7️⃣ Refund Handling Workflow

Task: Manage refunds for cancelled, incomplete, or disputed jobs.
Fields:

- Job ID
- Refund Amount

- Reason for Refund
- Requestor (User / Provider)
- Refund Status

Functions:

- Process refund via original payment method
- Notify user and provider
- Log refund in transaction history
- Admin approval workflow for disputes

Purpose: Provide **fair and transparent refund management**.

---

8 Transaction History View

Task: Enable users and providers to view all payments.
Fields:

- Transaction ID
- Job ID
- Amount Paid / Received
- Payment Method
- Date & Time
- Status (Paid / Pending / Refunded)

Functions:

- Filter by date, status, or amount
- Download/export history
- Quick link to invoices

Purpose: Allow users and providers to **track financial activity** easily.

9️⃣ Provider Payout Request Feature

Task: Allow providers to request withdrawal of earnings.
Fields:

- Provider ID
- Amount Requested
- Bank / Wallet details
- Timestamp
- Status (Pending, Approved, Paid)

Functions:

- Trigger payout via payment gateway or bank transfer
- Notify provider of status updates
- Deduct platform commission automatically before transfer

Purpose: Ensure **timely and accurate payouts** for service providers.

🔟 Automated Commission Deduction

Task: Deduct platform commission from every transaction automatically.
Fields / Data:

- Job ID
- Total Amount Paid
- Commission Percentage / Amount
- Provider Net Amount

Functions:

- Calculate commission based on job type / category
- Deduct commission before releasing funds to provider
- Include commission info in invoice/receipt

Purpose: Streamline revenue generation while maintaining **financial transparency**.

Module: Ratings & Reviews

This module manages **post-job feedback**, helps maintain service quality, and fosters trust and accountability between users and providers.

1️⃣ User Rating Provider After Job

Task: Allow users to rate providers after job completion.
Fields:

- Job ID
- Provider ID
- User ID
- Rating (1–5 stars)
- Timestamp

Functions:

- Capture star rating after job completion
- Optional trigger reminder notification if user hasn't rated within 24 hours
- Store rating in provider profile

Purpose: Reflect provider performance and quality of service.

2️⃣ Provider Rating User After Job

Task: Allow providers to rate users after job completion.
Fields:

- Job ID
- User ID
- Provider ID
- Rating (1–5 stars)
- Timestamp

Functions:

- Capture rating for user reliability/behavior
- Display aggregate user rating for future providers
- Optionally notify user of received rating

Purpose: Encourage respectful and cooperative behavior from users.

3️⃣ 1–5 Star Rating System

Task: Standardized rating scale for simplicity and comparison.
Fields:

- Rating Value (1–5)
- Weighted average for cumulative score
- Category-specific ratings (optional: punctuality, quality, professionalism)

Functions:

- Calculate average ratings for providers and users
- Display rating badges in search results, provider profile, and job details

- Filter/sort by rating

Purpose: Allow **quick assessment of quality** and build trust.

---

4 Text Review Submission

Task: Let users/providers write detailed feedback.
Fields:

- Job ID
- User / Provider ID
- Text comment (limit 500–1000 chars)
- Timestamp

Functions:

- Link review to completed job
- Display on provider/user profile
- Enable filtering and moderation by admin

Purpose: Provides **qualitative feedback** to complement star ratings.

---

5 Optional Image/Video Feedback

Task: Let users/providers attach media evidence.
Fields:

- Job ID
- File Type (Image / Video)
- File URL or storage path
- Timestamp

Functions:

- Upload and store securely
- Display with review
- Moderation tools for inappropriate content

Purpose: Improves **review credibility** and clarity for future users.

---

6 View Ratings Before Hiring Provider

Task: Allow users to see provider ratings and reviews before selecting.
Fields:

- Provider Average Rating
- Total Jobs Completed
- Recent Reviews
- Star rating distribution (1–5 stars)

Functions:

- Display rating summary in search results and provider profile
- Sort/filter providers by rating
- Optional highlight “Top-rated” badge

Purpose: Help users **make informed hiring decisions**.

---

7 Provider Response to Reviews

Task: Allow providers to reply to user reviews.
Fields:

- Job ID

- Review ID
- Response Text
- Timestamp

Functions:

- Post public reply linked to review
- Notify user of provider response
- Enable moderation for inappropriate responses

Purpose: Enables **two-way communication** and builds provider credibility.

---

8 Top-Rated Provider Badges

Task: Highlight providers with consistently high ratings.
Fields:

- Provider ID
- Badge Type (e.g., “Top-rated,” “5-Star Provider”)
- Criteria (average rating ≥ 4.5 & completed ≥ 20 jobs)

Functions:

- Display badge in profile, search results, and job details
- Dynamically update badges based on rating changes

Purpose: Incentivizes providers to maintain high standards and attracts more users.

---

9 Gamified Reward for Frequent Reviewers

Task: Encourage users to leave reviews consistently.
Fields:

- User ID
- Review Count
- Reward Points / Badge

Functions:

- Award points or badges for each submitted review
- Track milestone achievements (e.g., “10 reviews = Gold Reviewer”)
- Optional discount or credit integration

Purpose: Promote **active engagement** and generate more feedback data.

🔟 Flag Inappropriate Reviews

Task: Allow users/providers to report reviews that violate guidelines.
Fields:

- Review ID
- Flagged By (User / Provider)
- Reason (Dropdown/Text)
- Timestamp

Functions:

- Send flagged review for admin moderation
- Optionally hide flagged review until resolved
- Log resolution status and action taken

Purpose: Maintain **review authenticity and platform trustworthiness**.

Module: Provider Onboarding & Verification

This module ensures that service providers are **verified, trusted, and fully equipped** to accept jobs, while giving admins oversight and control.

1️⃣ Upload National ID

Task: Collect government-issued ID for verification.
Fields:

- Provider ID
- ID Type (e.g., NIC / Passport)
- ID Number
- ID Image Upload

Functions:

- Validate file format and size
- Store securely in database/cloud
- Link ID to provider profile

Purpose: Ensure **identity verification** for safety and trust.

2️⃣ Upload Selfie Photo

Task: Capture provider photo for face-matching verification.
Fields:

- Provider ID
- Selfie Photo Upload

Functions:

- Validate image quality
- Compare with uploaded National ID (AI-based face recognition)
- Flag mismatches for manual review

Purpose: Confirms that the provider is the **actual person** on the ID.

3️⃣ Upload Optional Certificates

Task: Allow providers to upload skill-related certifications.
Fields:

- Provider ID
- Certificate Name / Type
- Upload File / Image
- Issued Date

Functions:

- Store certificates linked to provider profile
- Display in provider portfolio for users
- Optional admin verification for authenticity

Purpose: Adds **credibility and trust** for skilled service providers.

4️⃣ Select Service Categories

Task: Let providers choose categories/subcategories they offer services in.
Fields:

- Provider ID
- Main Category (Transport, Home, Garden…)

- Subcategories
- Skills / Specialization

Functions:

- Map provider to jobs in selected categories
- Enable filtering/searching by category
- Optional skill-level input (e.g., Beginner / Expert)

Purpose: Ensures **relevant job matching** based on provider expertise.

---

5 Admin Verification Workflow

Task: Allow admins to verify provider credentials.
Fields:

- Provider ID
- Verification Status (Pending, Approved, Rejected)
- Notes / Comments
- Timestamp

Functions:

- Review uploaded documents
- Approve / Reject providers
- Trigger notifications to provider about status

Purpose: Maintain **quality control and platform safety**.

---

6 AI-Based Face Match for ID Verification

Task: Automate identity verification using AI.
Fields / Data:

- ID Photo
- Selfie Photo
- Matching Confidence Score

Functions:

- Compare selfie with ID using AI
- Flag low-confidence matches for manual review
- Update verification status automatically if match is high

Purpose: Reduce **manual effort** and ensure **secure identity verification**.

7️⃣ Assign “Verified” Badge

Task: Mark verified providers in the app.
Fields:

- Provider ID
- Badge Type (“Verified”)
- Assigned Date

Functions:

- Display badge on provider profile
- Filter providers by verification status
- Include badge in search results and job listings

Purpose: Highlight **trusted providers** for users.

---

8 Display Provider Profile & Portfolio

Task: Show provider info to users before hiring.
Fields:

- Provider Name
- Profile Picture
- Verification Badge
- Services Offered / Skills
- Portfolio Images / Videos
- Ratings & Reviews
- Completed Jobs Count

Functions:

- Editable by provider
- Display in search and job details
- Optional social proof integration

Purpose: Helps users **make informed hiring decisions**.

---

9 Set Provider Availability Schedule

Task: Let providers manage when they can accept jobs.
Fields:

- Provider ID
- Daily Availability (Start/End time)
- Days of Week
- Breaks / Off-hours

Functions:

- Show availability to users when posting jobs
- Avoid assigning jobs outside availability
- Update dynamically on provider dashboard

Purpose: Ensures **job matching respects provider schedules**.

🔟 Provider Dashboard for Earnings & Jobs

Task: Give providers a central dashboard to manage work.
Fields / Data:

- Upcoming Jobs
- Completed Jobs
- Total Earnings
- Pending Payouts
- Ratings & Reviews
- Job Alerts / Notifications

Functions:

- Filter jobs by status (Pending, Accepted, Completed)
- Request payouts or view wallet balance
- Track performance metrics (rating, job completion rate)

Purpose: Provides **full control, transparency, and performance insights** for providers.
